

WHO WE ARE

RODMENA builds durable, mission-critical software platforms — workflow orchestration, distributed systems and the tooling around them. Bank-grade reliability, delivered by a team with 20+ years of experience.

WHAT WE DO

- **Software Platform Development.** End-to-end design and delivery of bespoke, production-grade software platforms in Python, Erlang/Elixir and JavaScript.
- **Distributed Systems.** Fault-tolerant, horizontally scalable systems built for reliability under load, using proven concurrency and messaging patterns.
- **Workflow Automation & Highway.** Design and implementation of durable workflow orchestration — including deployment and custom workflows on our Highway engine.
- **Cloud & Data Infrastructure.** Cloud architecture and data platforms on AWS and PostgreSQL — from provisioning to observability and cost control.
- **Integration Services.** Connect systems, APIs and third-party services cleanly — bridging legacy platforms with modern infrastructure.
- **Support & Consulting.** Ongoing support, training, and strategic engineering consulting to keep mission-critical systems healthy.

FLAGSHIP PRODUCT — HIGHWAY

A workflow engine where application data and workflow state commit in the same PostgreSQL transaction — so partial failures are impossible. No Kafka, no Redis, no external queues.

CORE TECHNOLOGIES

Python

Erlang / Elixir

JavaScript

PostgreSQL

AWS

ASSURANCE

Certifications held: ICO Data Protection Registration. Live, honest statuses for every certification, insurance policy and company policy are published at rodmena.co.uk/trust.html.
